Swiss labour market access under the EU-Switzerland Free Movement Agreement — available as a cross-border commuter (G permit) or relocating to Ticino

Available immediately

PROFILE

Self-taught technical professional specializing in Linux systems, containerized environments, virtualization and network troubleshooting. Built and documented a self-hosted monitoring and log-analysis stack (Grafana, Loki, Promtail) and a Proxmox VE virtualization environment running multiple VMs. Native Italian and Spanish, fluent Romanian, B2 English. Seeking a role in technical support, NOC or infrastructure operations, with a long-term interest in cloud and infrastructure security.

CORE SKILLS

Systems: Linux (Ubuntu, Arch, Kali), Windows, macOS, WSL — user and permission management, services, systemd, logs

Virtualization: Proxmox VE — hypervisor installation and configuration, VM provisioning, storage (LVM), resource allocation

Containers: Docker, Docker Compose — multi-service deployments, port mapping, service verification

Networking: SSH, DNS fundamentals, NAT and port forwarding, reverse proxies, tunneling, Tailscale, Nginx

Monitoring & Log Analysis: Grafana, Loki, Promtail — centralized logging, dashboards, Uptime Kuma

Security Fundamentals: Nmap, Burp Suite, basic web vulnerability testing (XSS), CVE and dependency review, responsible disclosure process

Scripting: Bash, Python (fundamentals), JavaScript/Electron

Tools: Git/GitHub, VS Code

INDEPENDENT TECHNICAL PROJECTS (SELF-DIRECTED)

GT0u Labs — personal lab

Bucharest, Romania | 2025 – Present

- Installed and configured Proxmox VE on dedicated hardware, provisioning and managing multiple virtual machines, including a Kali Linux environment for network reconnaissance exercises with Nmap.
- Deployed a self-hosted log monitoring stack (Grafana, Loki, Promtail) on a Linux server, centralizing logs from multiple Docker services into searchable dashboards.
- Built an incident-response lab (Docker Compose + Nginx + Uptime Kuma): simulated a service outage, detected the failure through monitoring alerts, restored service and produced a written report with timeline and root-cause notes.
- Configured secure remote access and network tooling (Tailscale, SSH, reverse proxies) across self-hosted environments, applying production-style access control.
- Conducted introductory security research: reviewed CVEs and dependency vulnerabilities, tested basic web vulnerabilities with Burp Suite, and submitted a responsible disclosure report to Valve regarding an outdated FFmpeg dependency in the Steam Link Linux client (triaged).
- Resolved a GPU passthrough (VFIO) failure on Proxmox: diagnosed a PCI ROM signature error via dmesg, fixed it with a card-specific VBIOS (romfile), reassigned USB devices and corrected the boot order. Troubleshooting process and fix documented step by step.

SELECTED PROJECTS

homelab-notes — github.com/gt0u-labs/homelab-notes

Documented Linux, Docker and networking labs: permissions, services and logs, Docker Compose, Proxmox virtualization, monitoring and incident recovery.

Portfolio site — gt0u-labs.github.io

Self-built static site: infrastructure projects, technical stack and training.

TRAINING & CERTIFICATIONS

- AWS Cloud Practitioner Essentials — course completed, AWS Skill Builder (2026)
- Aruba Networking Essentials — course completed (2026)
- Ongoing hands-on defensive security training — HTB Academy, HTB Labs, TryHackMe: 64 modules and labs completed (2026), focused on alert triage, log analysis and email/phishing analysis. Full log: github.com/gt0u-labs/security-learning-log
- Self-directed study: Proxmox virtualization, Docker/Linux administration, log monitoring, web security fundamentals

EDUCATION

Self-directed technical training (2024 – present): Linux administration, virtualization, containers, networking, monitoring.

Compulsory education completed (Romania).
