PROFILE

Self-taught technical professional specializing in Linux systems, containerized environments, virtualization, and network troubleshooting. Builds and documents practical infrastructure projects — including a self-hosted monitoring/log-analysis stack (Grafana, Loki, Promtail) and a Proxmox VE virtualization environment with multiple VMs — to develop production-relevant support and operations skills. Comfortable working independently across Linux, Windows, and networking fundamentals, with a growing foundation in security-conscious system administration. Seeking a junior role in technical support, NOC, or infrastructure operations, with a long-term interest in cloud and infrastructure security.

CORE SKILLS

Systems: Linux (Ubuntu, Arch, Kali), Windows, macOS, WSL — user/permission management, services, systemd, logs

Virtualization: Proxmox VE — hypervisor installation and configuration, VM provisioning, storage (LVM), resource allocation

Containers: Docker, Docker Compose — multi-service deployments, port mapping, service verification

Networking: SSH, DNS fundamentals, NAT & port forwarding, reverse proxies, tunneling, Tailscale, Nginx

Monitoring & Log Analysis: Grafana, Loki, Promtail — centralized logging, log-volume dashboards, Uptime Kuma

Security Fundamentals: Nmap, Burp Suite, basic web vulnerability testing (XSS), CVE/dependency review, responsible disclosure process

Scripting: Bash, Python (fundamentals), JavaScript/Electron

Tools: Git/GitHub, VS Code

PRACTICAL EXPERIENCE

Independent Infrastructure & Support Projects (GT0u Labs)

Bucharest, Romania — Remote | 2025 – Present

- Installed and configured Proxmox VE on dedicated hardware, provisioning and managing multiple virtual machines for infrastructure and security practice, including a dedicated Kali Linux environment for network reconnaissance exercises.
- Used Nmap to identify open services and versions in a controlled lab environment, connecting reconnaissance practice to the monitoring stack for future detection exercises.
- Deployed a self-hosted log monitoring stack (Grafana, Loki, Promtail) on a dedicated Linux server, centralizing logs from multiple Docker services into searchable, visual dashboards.
- Designed and documented a multi-service homelab covering Linux administration, Docker Compose orchestration, and Nginx service deployment, published as a structured reference repository.
- Built a monitoring and incident-response lab (Docker Compose + Nginx + Uptime Kuma): simulated a service outage, detected the failure through monitoring alerts, restored service, and produced a written incident report with timeline and root-cause notes.
- Practiced day-to-day support workflows — service status checks, log analysis, HTTP verification with curl, and structured troubleshooting notes — mirroring real L1/L2 support and NOC processes.
- Configured secure remote access and network tooling (Tailscale, SSH, reverse proxies) across self-hosted environments to practice production-style access control.
- Conducted introductory security research: reviewed CVEs and dependency vulnerabilities, tested basic web vulnerabilities with Burp Suite, and submitted a responsible disclosure report to Valve regarding an outdated FFmpeg dependency in the Steam Link Linux client (triaged as Informative; no working PoC).

SELECTED PROJECTS

homelab-notes — github.com/gt0u-labs/homelab-notes

Documented Linux, Docker, and networking labs: permissions, services and logs, Docker Compose workflows, virtualization with Proxmox, and monitoring/incident-recovery exercises.

Portfolio site — gt0u-labs.github.io

Self-built static site documenting infrastructure projects, stack, and certifications.

CERTIFICATIONS & TRAINING

- AWS Cloud Practitioner Essentials — Amazon Web Services Training and Certification (Credly-verified badge, July 2026)
- Aruba Networking Essentials — David Bombal course (completed July 2026)
- Hack4u — Linux customization certificate
- Self-directed study: Proxmox virtualization, Docker/Linux administration, log monitoring, web security fundamentals

LANGUAGES

Italian: Native

Spanish: Native

Romanian: Fluent

English: Upper-Intermediate (B2), actively progressing toward advanced professional fluency

German: Learning (self-study)
